5 KVA-3000 KVA

Low Voltage Power Equipment **Servo Voltage Stabilizer**

PCTL Automation manufactures and offers a full range of premium quality automatic servo voltage stabilizers which are in accordance with ISO standards these stabilizers are perfect for the application of protecting installation against the under and over voltage fluctuations, stabilizers are manufactured to encompass a wide operating voltage window and output tolerance of 1-2 % PCTL-DLT-SRV series from 3KVA to 3000KVA, The stabilizers are fully microprocessor based and a continuous voltage correction ensures a very stable voltage to the installation, under very harsh environmental conditions. All stabilizers are manufactured using dry type technology necessarily obviating the need of cooling oil. Internal components such as inductors and coils used are of high conductivity copper enabling an efficient power transfer during out of voltage window correction of the output supply voltage
